Extra Insulation

Standard insulation is 4" of Rigid foam Polyisyanurate insulation. Additional insulating of up to 1.5-4 more inches can be added. Insulation on sides and top is 4" standard. Bottom is 3".

Custom tanks:

Please contact us for your exact needs. We can build to any size you need for replacement tanks.

Replacement of old liners:

Please provide us with exact inside measurements and we will give you a quote usally within 24 hours.

Other notes:

1. The smaller tanks we build will fit through standard doors. However, the easiest thing to do is to buy broken down and built on site. If you buy a tank that is broken down, then deduct 10% from the dealer price.
2. With tanks that are shipped fully assembled, one needs to order these ahead of time if they are going into a new structure to be used with radiant floor heating or other water heating application. The structure needs to be built around the tank.
3. All tanks can be shipped to you broken down. However, the warranty will be void unless assembled by the dealer for quality control.
4. Tank prices do NOT include pump, flow meter or wireless thermometers. These are usually provided by dealer. Tank does include a minimum of one copper heat exchangers for DHW use. Other internal or external heat exchangers can be ordered or added to your order. We can provide pumps or other items needed to complete your system.
5. All tanks are shipped freight prepaid by client to business to business address. Shipment to residential address is an additional \$75. Local shipments are free within 10 miles roundtrip of Fort Lupton, CO. After that the cost is \$.60/mile to site.
6. Special equipment is needed to move completely assembled tanks. A pallet jack, fork lift, dollies, or similar devices should be used to move these tanks. The smaller tanks can be lifted by two or three people but the larger tanks must be moved by the equipment above.

All prices subject to change without notice
